ABSTRACT:

PROBLEM TO BE SOLVED: To make a coin easy to put into a slot to improve facility for a player by equipping a coin slot which enables a prescribed number of balls to be launched onto a retaining part structure of a coin retaining pan to retain prize coins or its vicinity.

SOLUTION: A first coin retaining pan 4 is made of synthetic resin and equipped with a horizontal bed 11 provided with a coin retaining part 10 on

one side of a front dent part and a coin input part 12, a coin number display part 13, a coin input setting switch 13, etc., on another side. The left part of the first coin retaining pan 4 is made to be the coin retaining part 10 and the right half part to be the bed 11. A liquidation switch is equipped on the side part, whose starting switch 15 actuates a ball supplier on time the player desires after inputting a coin into the pachinko game machine. Further, a launching device is set to start a supply stand-by action. A ball is hit by an operation handle. A coin input part is equipped on the back side of the retaining pan 4 to facilitate coin inputting to improve facility for a player.
